

Microcurrent Non Surgical Face Lift

Microcurrent Non-surgical Face Lift is an effective, more natural alternative than any other non-surgical cosmetic treatment available today. It is safe, non-invasive, painless, free from harmful side effects, causes no redness or downtime, and is very affordable. Unlike chemical peels and lasers that burn and wound the skin, our technology relies on customized waveforms of microcurrent. Some of the many benefits of the Microcurrent Non-surgical Face Lift include:

- Diminishes or eliminates fine lines, creases & wrinkles
- Hydrates & revitalizes skin, making it smoother & softer
- Improves circulation & lymphatic drainage
- Visibly firms & contours, lifting the overall droop
- Restores the 'pink glow' hue of youthful skin
- Tightens sagging jowls, double chins & fatty cheeks
- Clears up or reduces acne, sinusitis, & rosacea
- Reduces the appearance of stretch marks
- Reduces dark circles & puffiness under eyes
- Affordable treatment programs

Frequently Asked Questions

What is microcurrent?

Microcurrent is minute, pulsating currents of electricity measured in microamps. These currents are finely tuned to the level of the normal electrical exchanges which take place naturally at the body's cellular level, thereby mimicking our normal electrical impulses. Since these currents are biologically compatible with the natural currents in the body, they have the ability to penetrate the cell and effectively augment the body's ability to heal and rejuvenate itself.

Microcurrent has been traditionally used for healing purposes for over 60 years. The cosmetic use of micro-current was discovered accidentally by a physician attempting to reduce the facial paralysis of his Bells Palsy patients. After treatment, their paralysis was noticeably lifted as were facial wrinkles and creases. His patients began to look younger!

Microcurrent has been scientifically proven to stimulate the following regenerative properties within the body:

- 500% increase in ATP (energy for the cells)
- 35% increase in blood circulation
- 45% increase in the number of elastin fibers in the dermis
- 50% increase in the length of the elastin fibers
- 10% increase in collagen
- 28% increase in lymphatic drainage
- increase cell oxygenation and absorption of nutrients

How is the treatment done?

The procedure involves the delivery of microcurrent into the face through specially designed conducting gloves that are gently drawn across facial muscles and applied at specific acupuncture points on the face and neck. The treatment helps to normalize the cellular tissue, reconditions muscles and returns them to their youthful tone. The experience is described as wonderfully relaxing, causes no pain or swelling, and the age defying results are remarkable.

What age Range is this suited for?

Microcurrent Face Lift is recommended for adult clients of all ages, since it preserves and maintains the youthful elements of younger clients, postponing future aging issues, and restores youthfulness in older clients.

Is it painful or harmful?

Not at all. The treatment is wonderfully relaxing, like a facial massage. Microcurrent has been safely used for over 60 years with no harmful side effects. There is no pain during or after the procedure, no redness or swelling, and no downtime. You could take a treatment on your lunch hour and return to work looking refreshed and well rested .

How soon will I see results and how long will they last?

Most clients see noticeable results on their first session. As with any non-surgical body treatment, results are cumulative and become better as the program of recommended treatments progresses. Maintenance varies depending on the age and condition of the skin; it can range from a few visits per year to once a month. Overall changes are gradual rather than drastic, and look more natural than surgical and other cosmetic procedures.
